

# Governor Cuomo:

# Ban Fracking Now!

**Put the safety of our water before the profits of the oil & gas industry!**

Hydraulic fracturing, or "fracking," is a highly dangerous method of drilling for natural gas that threatens our drinking water, health, communities, and environment.

Fracking involves the injection of water, chemicals, and sand underground to crack open rock formations that contain gas. Documented risks include contaminated groundwater, wastewater that contains radioactive elements, and air pollution.

Governor Cuomo is proposing to open New York to fracking. Fortunately, we have a window of opportunity to stop his dangerous plan.

**Please call Governor Cuomo to urge him to ban fracking: 866-961-3208**

**There are alternatives to gas, but there are no alternatives to water!**

For more information, visit [www.FoodandWaterWatch.org](http://www.FoodandWaterWatch.org).
